

Full Width Landing Entrances

Benefits to Constructors:

- Assisting with social distancing measures now needed for safe working on site. Speeds up completion of communal areas, the area of intense activity by many trades during the latter stage of the building completion.
- Reduces the need for day-work by lift engineer to gain access and move the lift up and down to fire line inside of shaft entrances.
- Provides immediate full width entrance protection once landing doors are fitted, improving health and safety on each landing.
- The lift Installation and testing can be one continuous process.
